So what is a Talking Tee

The Talking Tee, greets golfers as they arrive at the Tee, with a welcome, details about and tips on the hole they are about to play and a short message from the sponsor.

The Talking Tee can also be a Safety Point where Golfers can go if they need assistance, that is signalled back at the Club House or Pro Shop, and has both Audio and Visual capability.

The Talking Tee is a brand new idea that provides visitors to the Club with useful information and allows Clubs to provide even more value to their sponsors.

The information program is operated by sensor and plays 'once only' allowing players a predetermined amount of time before Teeing off, and then resets.

Electrically operated (low voltage) or solar charged with the option to include a Safety Point (press to talk) and or a Security Camera (constant) to monitor vulnerable area's of the Course. All housed in a steel box and metal stand, bolted to concrete or cemented into the ground.

The audio player is time sensitive and can play a morning or afternoon greeting and can be programmed 'not to play' on certain days at certain times or play an alternative message at those times, Great for Sponsored Golf Days.

Artwork and professional voice over is included at each location.

Please contact us regarding pricing structure of units with and without Safety Point.

In - Sign Installation

This Talking Display installation was incorporated into the signage at the Murphy's Ave gate at the Wollongong Botanic Gardens.

The Gardens audio program was written to inform and give directions to each part of the Gardens. As there was already a sign board at the gate it was decided to incorporate the TDU device inside the signage.

The project included a new print for the sign with room for the press buttons to be installed under each Area Heading.

The audio program is operated by a movement sensor and then encourage's visitors to come and press buttons for the information they require. Powered by transformer from the nearby light pole.

In addition, the system is programmed to provide "time specific" information that reminds visitors of closing times and suggests to unauthorised persons in the Gardens after hours they should leave and that Security has been notified of their presence.

This unit is powered (low voltage) by the nearby power pole & can be programmed to keep quiet or provide different messages at special promotional times.
